

### **Please Note:**

**This device is designed solely as a matrix converter and is not a scaler.**

**If upon initial setup, you do not see an image on your display, you probably need to change the output resolution of your computer in the display control panel to either:**

<b>640X480</b>	<b>60Hz</b>
<b>1280X720</b>	<b>60Hz</b>

**If your computer's display control panel does not have these output options, you can try installing Powerstrip® free shareware software (<http://entechtaiwan.com/util/ps.shtml>) and changing the "Display Configurations" to one of the resolution settings above.**
