Complete Built-to-Order Solutions from the expert system integrators at Key Digital

Key Digital’s Encompass360™ program is designed to deliver exactly what integrators have been looking for – a new way to design, specify, integrate and then quickly deliver and install in hours install large complex systems. To simplify this process this we have broken down the Encompass360™ program into five stages:

**Consult** Our engineers and programmers will work hand in hand with you going over your project’s timeline, goals and budget while looking over the project’s blueprints free of charge. We will discuss the optimal wiring design, sources and displays for each room to provide the best results to meet and exceed your client’s expectations for the intended system functionality. We’ll go over the control needs and design the most cost effective Compass Control® System to address the system parameters.

**Design** We will take everything that was discussed in the Consult stage and provide you with a detailed system design and project line diagram. You are also going to be provided an example of the Compass Control® user interface for your project to give both yourself and client an idea on how their system is going to be laid out. If there is a scope of work change or system details that need to be changed then this would be the time to do it before moving to the next stage.

**Build** Once the Design is signed off on, we will begin to assemble and rack mount the hardware in the Build stage. If you have a custom rack that you would like to use for the project you could ship it to our Engineering Lab or we will provide a standard rack for you. Once the hardware is installed and wired up it will be put through a 24 hour test cycle to ensure everything is working 100% before moving on to the final two stages. Our programming team will begin building and testing the Compass Control® System template that is customized to this project requirements and design.

**Integrate** In the Integration stage, we will combine the Compass Control® System with the hardware in the rack. Once the two systems are brought together we will run the system through a thorough test cycle to ensure that the system configuration and functionality is 100%. With Key Digital’s reputation for not settling for anything less than perfection, you can rest assured that this system has been tested and looked over several times before it gets signed off to move onto the final stage.

**Deliver** Finally we will take the complete rack mounted system and place it in a crate for shipping to your office or job site. Remember you are going to be receiving a complete turnkey solution. So, once you receive the rack all you will have to do is unpack it and make the final display and subsystem connections prior to turning the system over to your client.
