Key Digital Releases Compass Control®: A Fully Integrated Control System for Commercial Applications

Mount Vernon, NY. Key Digital Systems, Inc. – June 13, 2012 – Key Digital is proud to introduce its first comprehensive control system for commercial applications called Compass Control®. Compass Control® represents the first fully integrated major control system built from the ground up to use Apple's iOS 5 devices – iPad®, iPhone®, and iPod touch® – as its backbone.

Key Digital® in conjunction with Compass Control's Compass Alliance Partners (CAP) has created a fully integrated control system with driver support for hardware from the following brands: Aprilaire®, Boston Acoustics®, ClearOne®, Denon®, Furman®, ICRealtime Security Solutions®, iPort®, Key Digital®, LG®, Lutron®, Luxul®, Marantz®, MechoSystems®, Onkyo®, Panamax®, Primeview®, Russound®, SurgeX®, and Wolfvision®. Combining the knowledge and expertise from the different CAP brands has allowed Compass Control® to develop into a complete turnkey or commercial control solution.

This exciting new product can be used anywhere and at any time. Once the system has been programmed and the application activated using the **KD-CSL** Compass Control® software license, the system is ready for use. All of the control protocols are routed through the **KD-MC2500** Master Controller which effectively acts as the brain of the entire system. The Master Controller, which itself is controllable via TCP/IP, communicates with all devices in the system and integrates all components. Compass Control® is a powerful tool in an educational setting where it gives an educator control over audio, video, and lighting in order to create a better learning environment. Compass Control® even has the power to monitor hundreds of security cameras in an apartment building at the swipe of a finger.

Compass Control® has the ability to control devices via RS-232, IR, or TCP/IP. This new control system provides installers with bi-directional IR, two-way RS-232 with feedback, and two-way TCP/IP control for unlimited flexibility and maximum compatibility with new or existing devices. Compass Control® also provides control via relays and sensors demonstrating its nature as a powerful integration tool. When programming the system via the Compass Navigator® PC editor software, installers are given three separate database managers to make programming faster than traditional control systems. Compass Navigator® also enables installers to edit command code sets, allowing Compass Control® to be tailored to each and every system installation.

Key Digital Vice-President for Sales, Michael Lakhter, commented on Compass Control's readiness to take on market challenges, "With the combined efforts of all of our Compass Alliance Partners, Compass Control® represents the culmination of our efforts to create the most powerful, most user-friendly, and most comprehensive control system available on the market today."

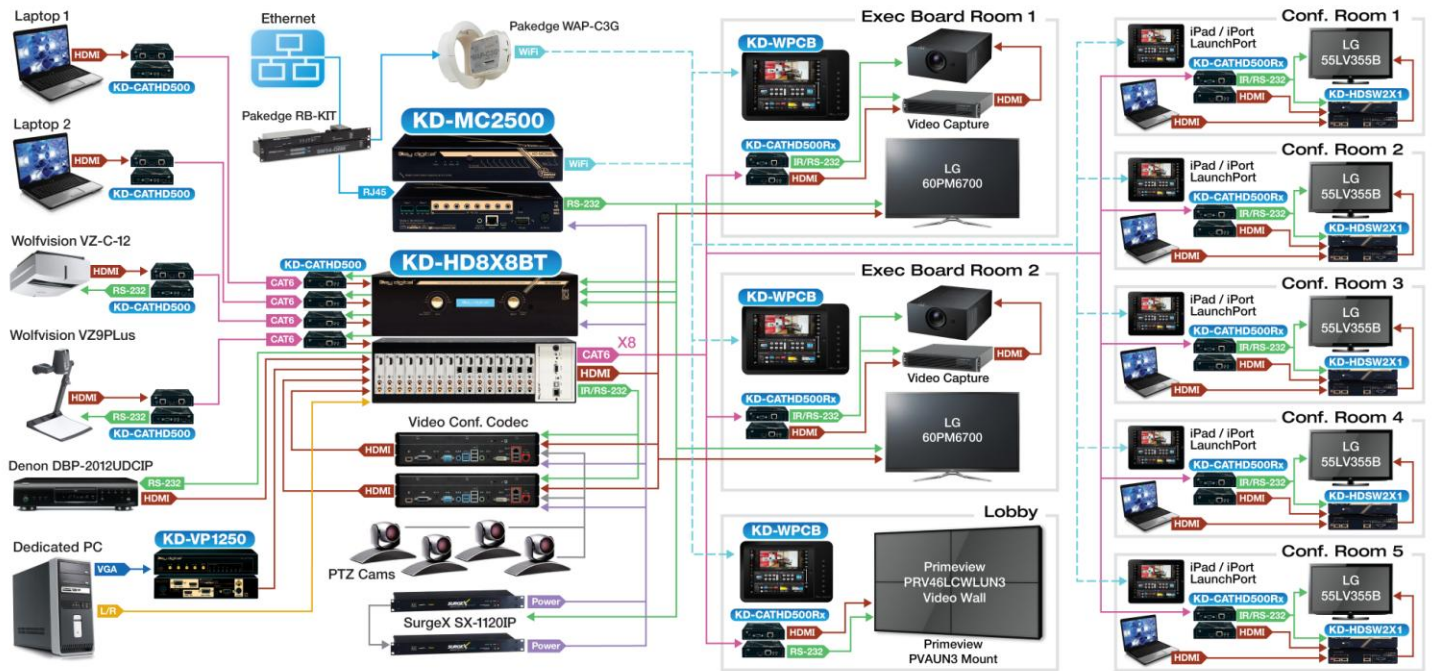

Come see today why Key Digital® and CAP are *the* Experts in Digital Video Technology and Solutions. For more information please visit or <http://www.keydigital.com>. For more information on Compass Control® please visit <http://keydigital.com/compass>. Key Digital® will be displaying Compass Control® at CEDIA 2012 – for more information [click here](#) or visit us at Booth #2046. Also please download the Compass Control® demo app by [clicking here](#).
