Key Digital® Introduces Two new HDMI Video Switchers/Distribution Amplifiers – The KD-HDMI2x4P & KD-HDMI2x8P

Mount Vernon, NY, July 25th, 2007 – Key Digital Systems, Inc., the leader in video technology and solutions, is introducing two all new HDMI switchers/distribution amplifiers in the **KD-HDMI2x4P** and **KD-HDMI2x8P**. These two new switchers can accommodate up to two HDMI inputs and distribute these signals into four (**KD-HDMI2x4P**) or eight (**KD-HDMI2x8P**) video outputs. Both switchers are HDMI 1.3 compliant with the capacity to handle all video signals from standard definition 480i to full HD 1080p.

Features for these switchers include:

- Supports coaxial digital audio, optical digital audio (Toslink) and analog audio
- Key Digital IAS circuit automatically senses and switches to the active video input
- Flexible EDID control manages the HDMI communication for any output
- Fully controllable through RS-232.
- Supports any HDMI resolution at 50Hz or 60 Hz.
- Can be cascaded to support up to 100 HDMI video displays

Michael Lakhter, VP, Sales for Key Digital says, “Our two new HDMI switchers set a new industry standard for flexibility and capability. We have a unique design in incorporating two-way EDID communication for HDMI devices. This “first to market” technology assures the customer that all products wired through the **KD-HDMI2x4P** and **KD-HDMI2x8P** will have perfect high definition images and that will not be down converted due to poor communication between source and display.”

The **KD-HDMI2x4P** and **KD-HDMI2x8P** have MSRP pricing of \$825.00 and \$2000.00 respectively.

Key Digital® Systems is a CES award-winning developer and manufacturer of leading-edge technology for HDTV applications, delivering total video systems solutions. The company manufactures a wide range of digital video processing and video signal distribution solutions marketed broadly to the HDTV community, such as digital video and audio processors, switchers, distribution amplifiers, cables, adapters, and more.
