Key Digital partner up with AMX and Takes Control of Your Home Automation System

Mount Vernon, NY – Key Digital, Inc., the experts in digital video technology and solutions, announced today that they have partnered with AMX. AMX is a technology-driven company that specializes in developing and marketing innovative home theater control products. The AMX and Key Digital partner program is designed to establish a tightly integrated network and organizations that is fueled by a common goal of promoting consumer electronic device interoperability in home automation.

“Key Digital’s collaboration with AMX will enable the use of audio and video processing, switching and distribution while maintaining home automation control and ease of use for which AMX is known for” said Michael Lakhter, Key Digital’s VP of Sales.

Key Digital now fully supports AMX Dynamic Device Discovery Protocol throughout our product line. This feature enables integrators to effortlessly configure Key Digital products within an AMX controlled environment.

Key Digital engineers worked closely with AMX in order to add the necessary AMX beacon to our product software. The beacon is an identifier which allows AMX to recognize the exact model Key Digital product as soon as it connected to the control system. Once the model is identified, the AMX system will automatically download the correct module from a database. This process happens with almost no effort on behalf of the integrator and ensures correct system implementation.

Together with Key Digital's highly anticipated video processor the KD-VPHD3 and the new addition to the FAT Boy family the KD-MSV8X8 equipped with an AMX beacon makes any application commercial or residential a plug and play reality.
